BUILD YOUR OWN

A NATURAL SWIM

Whichever model you choose, you will not be disappointed with the British Swim Spa range offering unrivalled aquatic luxury. Pro Plus and Turbine models come standard with swim exercise equipment including resistance arm bands, a swim tether and row bars so you can get the most out of your workout. All swim spa models have a height of over 1.5m, perfect for taller bathers and offering enough space for an authentic swimming experience.

PRO PLUS

The Pro Plus models offer 3 powerful swim jets in the shape of a letter box providing an even stream of current to swim against. The bottom jet acts as a levitator jet to help keep the swimmers legs afloat, offering a true swimming experience. There are a range of massage areas including two stand up zones, offering a full body massage for unrivalled hydrotherapy. Each massage pump operates up to 6 available streams of current/massage area for optimum power and performance. The tiered steps and seating is a standard feature, with optional massage jets offering an invigorating sports massage after an intense work out. This model also has a 'power button' injecting air into the swim jets for even more oomph.

TURBINE

Our Turbine double counter current system provides the most powerful swim available; without the surface water turbulence associated with many other swim spas on the market. This dynamic system creates a symmetrical counter current for an unrivalled swimming experience, with up to 8 different speed settings. It leaves nothing to be desired - swim, train and exercise all muscle groups at a distance of 4m plus. This model comes complete with levitator jets in the walls of the swim lane to help keep the swimmer afloat, tiered seating doubling up as steps, as well as the option of a hydrotherapy lounge featuring massage jets, and two stand up zones. The Turbine system is also available with the optional SmartSwim Watch, meaning you can have full control of your swimming experience at the touch of a button, perfect when training for an uninterrupted swim session.

PLEASE NOTE - The Turbine adds an extra 81cm onto the swim spa.

FEATURES

At the heart of every British Swim Spa are the key principles of energy efficiency, reliability, innovation and user experience.

That's why we can boast a long list of unique features! We have the experience, the knowledge and the customer feedback over a long history to enable us to design the ultimate swim spa.

ECOZONE™

There are 3 layers of insulation to our Eco Zone system which not only protects the parts and plumbing, but helps to reduce the noise from the vibrations of the swim spa and ultimately locks the heat in ensuring lower running costs.

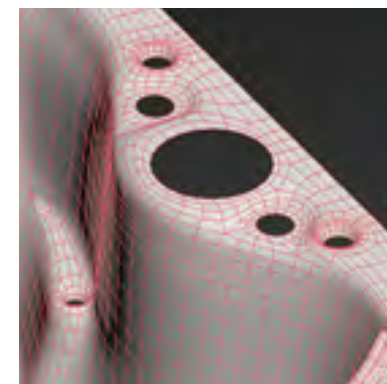

PUREZONE™

Our Pure Zone Plus system is perfect for those bathers with sensitive skin, who want the most chemical free system possible.

When the spa water filters, the water passes through a UV light attacking and destroying any bacteria, ultimately providing the cleanest and purest water possible, while reducing chemical consumption and maintenance.

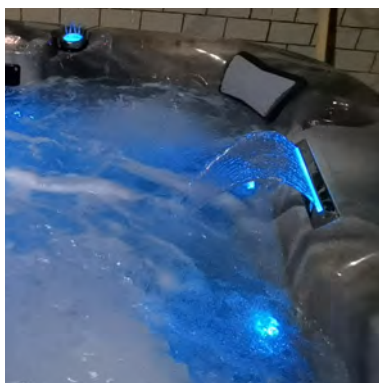

CLEAR™
ZONE

80% more effective than the average skimmer filtration system, Clear Zone technology provides external pressurized filtration where the filter is outside of the bathing area.

This provides cleaner, clearer water, less chemical consumption and maintenance, lower running costs and is ultimately more hygienic for all bathers.

ZENZONE™

Unwind in the Zen Zone with colour changing lighting and soothing waterfalls.

Experience adjustable blade waterfalls offering a cascade of hot water therapy that certainly add to the stunning aesthetics of the swim spa itself.

VIBROZONE™

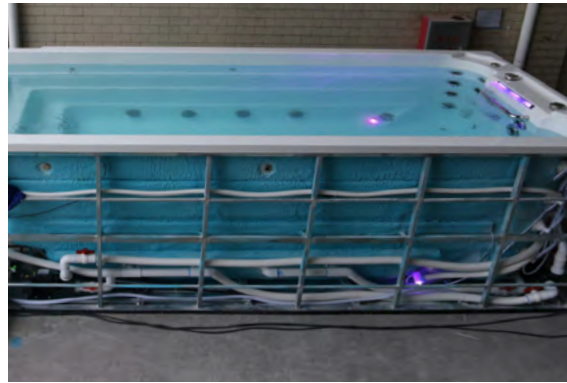

The Vibro Zone Plus option is our carefully and cleverly designed waterproof audio system and is housed in the cabinet of your spa delivering spectacular sound.

The 4 speaker system offers Bluetooth, AUX, USB & Radio, along with an impressive subwoofer complete with a waterproof remote control so you can create the ultimate party atmosphere.

SOLIDZONE™

The ABS fibreglass base protects the inner structure of the swim spa and provides a substantial and stable platform for the swim spa to be positioned securely.

An indestructible steel frame to support the shell and expanse of water and weight in your swim spa. The steel sub structure that we use has the highest strength to weight ratio of any building material available. The light gauge steel frame provides greater structural integrity than wood, especially needed for such a large expanse of acrylic and water. Steel offers superior corrosion protection, is strong and durable, and the obvious choice for lifetime of worry free fun.

The Aristech® acrylic is then supported by the strength of strategically placed steel reinforcement. The multiple layers of fibreglass combined with steel reinforcement ensures years of relentless strength and durability. This ensures a defect free product every time.

Whether you want a single chamber swim spa (in a range of sizes) or a dual temperature swim spa, you can choose from having seating (with or without a lounger) inside the swim spa, or tiered steps.

As well as this, when it comes to the strength and feel of the swim, you can opt for the Jet or Turbine system so you can really tailor your swim experience to suit your needs. And if that wasn't enough, with the dual temperature swim spa you have the option of a hot tub on the end or a slide, so all the family are catered for.

Featuring strong adjustable swim jets, hydrotherapy massage jets, as well as a choice of seating inside the swim spa. The Jet system swim spa features 3 adjustable swim jets in the shape of a letter box which produces an even current to swim against. Each jet can be injected with air which will increase the swim resistance, perfect for interval and endurance training.

The bottom swim jet acts as a levitator jet which helps keeps the bather's legs afloat when swimming, offering a much more realistic swimming experience.
